Products

Our company's offer includes **wide range of products, from valves to advanced installation systems**, which are used in various market sectors.

The team of constructors from the Implementation and Development Department are constantly working on new products, using the latest technologies and materials, in order to ensure our customers, that we have consistent quality of products.

We have our own design office, prototype room and laboratory, thanks to which it is possible to ensure the appropriate level of engineering of the developed solutions.

CRUDO

Company

We have been operating in the **sanitary installations and heating systems** since 1999 creating our products and sales philosophy from scratch.

Our team consists of **160 people** dedicated to customer service. We deliver our products to **11 European countries**.

Thanks to modern logistics and maintaining high stock levels in warehouses with a total **area of 4 500 m²**, we provide deliveries within **24 hours** in Poland.

We invest in innovative technical solutions, which we develop in our Implementation and Development Department, and then we test them in a modern laboratory. Our company meet the highest quality standards confirmed by **ISO 9001:2015 Certificate**, which we have held since 2009.

Our mission

We create innovative solutions that **make installers work easier.**

We combine experience with science and constantly develop technical knowledge of products. We build long lasting business relationships by supporting our partners in achieving their goals.

Innovations

Innovation is the **core of our success.**

We design and implement our original solutions that receive patent protection as inventions, industrial designs and utility designs. Any technology, that we developed is a response to specific market needs, so that our products make installers work easier.

We have 8 patents, 6 utility models and 6 industrial designs which are a confirmation of our innovation.

Laboratory

Our laboratory is **a modern research space,** in which we carry out detailed tests according to applicable European Standards.

We verify products at every stage, to constantly improve our solutions. Due to the specific needs of the research, many test equipment has been designed and made by our designers, which highlights our innovation and commitment to technology development.

Thanks to many years of experience, modern technological facilities and passion for innovation, we are constantly improving standards in the installation industry, providing solutions that meet the highest quality and functional requirements.

Production

We specialize in the production of **manifolds, pump groups and installation cabinets.**

We have our own production hall with an area of 1830 m², equipped with modern machines, including a precision laser, CNC lathes, coordinate measuring machine CNC, press brakes, welding room and powder paint room.

Our advanced machine park guarantees the highest quality, efficiency and repeatability of production processes.

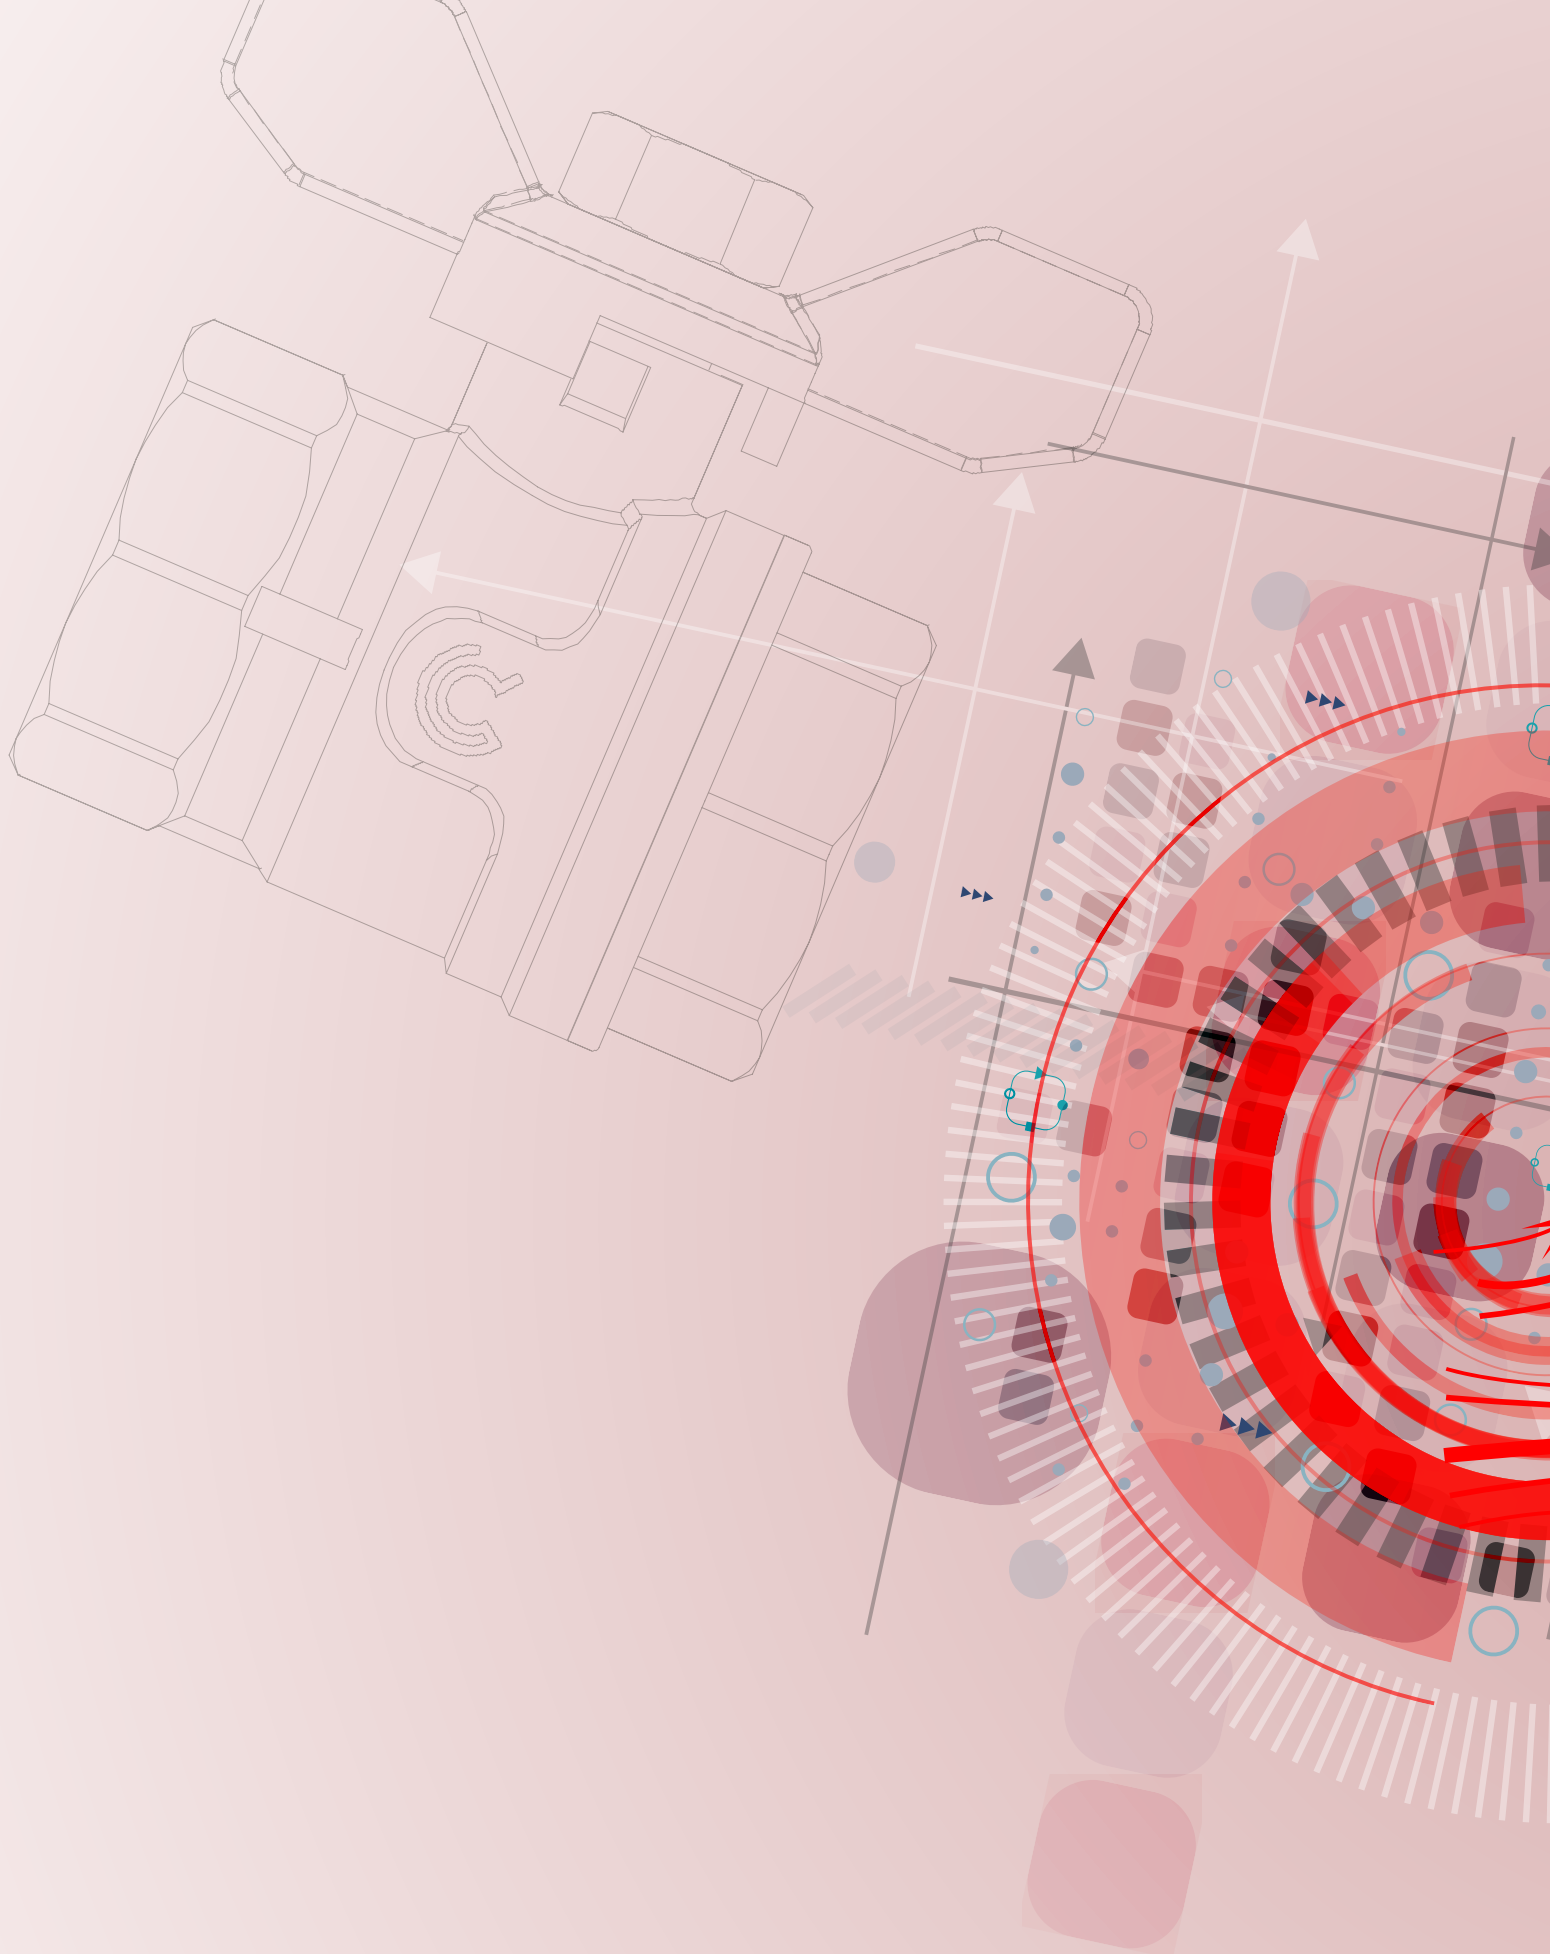

The products are made on the basis of original projects, taking into account the guidelines of our customers.

Quality control

Our approach to product quality is uncompromising and **includes control at every stage of the production process.**

Before leaving the production lines, our products are subjected to tests and examinations, which are aimed at checking their tightness and strength. The Quality Control Department checks each delivery of the product. This practice allows us to provide repeatable quality of products on the market.
